

Lotus Notes

Introduction

Note
This extension has been moved to the » PECL repository and is no longer bundled with PHP as of PHP 5.0.0. Information for installing this PECL extension may be found in the manual chapter titled Installation of PECL extensions . Additional information such as new releases, downloads, source files, maintainer information, and a CHANGELOG, can be located here: » http://pecl.php.net/package/notes .

Warning
This extension is currently not supported, thus looking for a maintainer.

Warning
This extension is <i>EXPERIMENTAL</i> . The behaviour of this extension?including the names of its functions and any other documentation surrounding this extension?may change without notice in a future release of PHP. This extension should be used at your own risk.

Installing/Configuring

Requirements

No external libraries are needed to build this extension.

Installation

There is no installation needed to use these functions; they are part of the PHP core.

Runtime Configuration

This extension has no configuration directives defined in *php.ini*.

Resource Types

This extension has no resource types defined.

Predefined Constants

This extension has no constants defined.

Lotus Notes Functions

notes_body

notes_body -- Open the message msg_number in the specified mailbox on the specified server (leave serv

Description

array **notes_body** (string \$server, string \$mailbox, int \$msg_number)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_copy_db

notes_copy_db -- Copy a Lotus Notes database

Description

bool **notes_copy_db** (string \$from_database_name, string \$to_database_name)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_create_db

notes_create_db -- Create a Lotus Notes database

Description

bool **notes_create_db** (string \$database_name)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_create_note

notes_create_note -- Create a note using form form_name

Description

bool **notes_create_note** (string \$database_name, string \$form_name)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_drop_db

notes_drop_db -- Drop a Lotus Notes database

Description

bool **notes_drop_db** (string \$database_name)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_find_note

notes_find_note -- Returns a note id found in database_name

Description

int **notes_find_note** (string \$database_name, string \$name [, string \$type])

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_header_info

notes_header_info -- Open the message msg_number in the specified mailbox on the specified server (leave serv

Description

object **notes_header_info** (string \$server, string \$mailbox, int \$msg_number)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_list_msgs

notes_list_msgs -- Returns the notes from a selected database_name

Description

bool **notes_list_msgs** (string \$db)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_mark_read

notes_mark_read -- Mark a note_id as read for the User user_name

Description

bool **notes_mark_read** (string \$database_name, string \$user_name, string \$note_id)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_mark_unread

notes_mark_unread -- Mark a note_id as unread for the User user_name

Description

bool **notes_mark_unread** (string \$database_name, string \$user_name, string \$note_id)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_nav_create

notes_nav_create -- Create a navigator name, in database_name

Description

bool **notes_nav_create** (string \$database_name, string \$name)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_search

notes_search -- Find notes that match keywords in database_name

Description

array **notes_search** (string \$database_name, string \$keywords)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_unread

notes_unread -- Returns the unread note id's for the current User user_name

Description

array **notes_unread** (string \$database_name, string \$user_name)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.

notes_version

notes_version -- Get the version Lotus Notes

Description

float **notes_version** (string \$database_name)

Warning
This function is <i>EXPERIMENTAL</i> . The behaviour of this function, its name, and surrounding documentation may change without notice in a future release of PHP. This function should be used at your own risk.

Warning
This function is currently not documented; only its argument list is available.
